

Name vacancy : Global Supply Chain Planner
Location :
Sector : manufacturing & Logistics
Subsector / Department : Global Logistics Services
Requisition Number :

Sector information

The Manufacturing & Logistics organization states the following mission: plan, develop and maintain a global network of qualified suppliers and factories, which is capable of delivering lithographic systems, related products and services that exceed customer expectations regarding quality, lead time, technology and cost.

Position in the organization

Within Manufacturing & Logistics; The department GLS (Global logistics services) consists of ~200 employees divided over four sub-departments:

- 1) **New Product Logistics (NPL):** Working closely with Development to prepare supply chain for new product; when this is achieved the logistics activities related to material provisioning to ASML factories are transfer to Sourcing Logistics and logistics activities related to spare part provisioning to ASML service office around the world (~60) are transferred to Customer Logistics
- 2) **Sourcing logistics (SL):** working closely with marketing/sales/manufacturing/sourcing to agree upon ASML master production plan. Working closely with manufacturing and sourcing to ensure material availability for this production plan.
- 3) **Customer Logistics (CL):** working closely with customer service/sales and external customers to ensure agreed upon service level agreements (SLA's) with regard to spare parts availability are set. Working closely with manufactory, sourcing and customer service to achieve these SLA's.
- 4) **Trade & Infra (T&I):** department responsible for logistics infrastructure (warehouses, freight forwarding etc) and trade and tax flows.

For the first two sub-departments ASML is looking for planner.

Job mission

Within NPL two type of planners:

- NPL-project planner : secure a swift time-to-market for new and revised products by developing, monitoring and enforcing a reliable, transparent and efficient logistic plan
- NPL-planner field introduction: ensure realization of adequate material availability for new products in Customer Support Processes.

Within SL on type of planner:

- SL-Planner: Manage and control the material availability in order to execute the master production plan for volume machine of ASML to fulfill the needs of our customers

Job description (in main lines)

Main job duties

Relevant for all planners

- At all times in control of the most critical parts which may have impact on execution of the master plan (either production master plan or development master plan)
- Keeps track of actual progress of these critical parts and reports on status
- Translates the collected information for planning proposals, makes analyzes with regard to feasibility and bottle-necks and initiates process making.
- Is leading in preparing and aftercare of decision-making meetings on behalf of these critical parts.
- Communicates status to the different interested parties, and takes care of different management-reports.

NPL Planner Field Introduction

- Translate to be achieve service level agreement into a spare part stocking strategy around the world for the new products
- Transfer to volume: Transfer parts and tools to regular CL volume operations when planning is relatively stable.

NPL Project Planner

- Participate in D&E development products to ensure logistics requirements are taken into account
- Plan and report on the timely availability of TPD (Technical Product Documentation).
- Create a stable, regular environment for all parts by defining logistic parameter settings in the ERP-system in order to transfer parts to Sourcing Logistics.
- Provide logistic input for Engineering Change Requests from development and determine necessary actions.
